STANDARD OPERATING PROCEDURE: GLOBAL PHARMACOVIGILANCE & SAFETY TRIAGE

Document: SOP-PV-042 (v3.0) | Department: Drug Safety & Pharmacovigilance | Effective: 2025-2027

Section 1.0 — Purpose & Regulatory Authority

This SOP enforces compliance with FDA 21 CFR 312.32 (IND safety reports), 21 CFR 314.80 (post-marketing 15-day alert reports), and ICH E2A guidance for rapid identification, triage, and notification of serious adverse reactions.

Section 2.0 — Expedited Reporting Timelines

Fatal or Life-Threatening SAEs: Must be reported to the FDA and relevant institutional review boards (IRBs) no later than **7 calendar days** following initial receipt of information.

Serious, Unexpected Adverse Events (SUSARs): Must be submitted within **15 calendar days**. Any safety event causing inpatient hospitalization or persistent functional incapacity qualifies as serious and triggers mandatory 15-day expedited reporting.

Section 3.0 — Audit & Quality Inspection Rules

All Individual Case Safety Reports (ICSRs) must be logged into the safety database within 24 hours of receipt. A reporting latency exceeding 15 days constitutes a critical regulatory compliance violation subject to FDA Form 483 warning letters.
